

Does Your Child Have a Language Impairment?

WE WANT TO UNDERSTAND THE AMOUNT OF THERAPY THAT CHILDREN WITH DIAGNOSED LANGUAGE IMPAIRMENT NEED TO IMPROVE THEIR VOCABULARY SKILLS.

If your child...

- Is 5-8 years old
- Primarily speaks English
- Receives speech therapy through their school with a primary diagnosis of language impairment
- Does not have other diagnosis such as autism or hearing loss

They may qualify to participate!

Participants will...

- Receive language therapy focused on vocabulary (equivalent to \$3,000 worth of therapy if it were paid out of pocket)
- Participate remotely (online only)
- Receive up to \$100 in gift cards

Our study is conducted online and participants will be provided with access to Wi-Fi and devices.

ENROLLMENT IN OUR STUDY IS ONGOING. FAMILIES MAY JOIN THE STUDY AT ANYTIME, YEAR ROUND.
